**INSTRUCTIONS FOR INSTALLING QUICKREPORT v4 PROFESSIONAL**

Before installing v4, please ensure that v3 and/or QR Standard are completely uninstalled.

Please follow the instructions below:

**UNINSTALLING A PREVIOUS VERSION OF QUICKREPORT**

--Remove the current QR and QRExports libraries from the design libraries list using the Component|Install Package menu.

--Note that the libraries are now called QR4DesignXX and QR4RunXX. Remove any copies of qrptX0.bpl from the Windows/System32 directory.

**INSTALLING QUICKREPORT v4 PROFESSIONAL**

 --Run the self installer EXE.

--Install the QR4 components by using the 'Components|Install packages' menu and browsing to Program files/Borland/DelphiX/Projects/BPL/QR4DesignXX.bpl,
Or
. ../BDS 4.0/quickrpt/BPL/QR4DesignD2006.bpl.

**GENERAL NOTES**

--HTML exports - be sure to set the new band property 'TransparentBand' to true.

--It is a good practice to include the QR source path in your project search path list.  The path is: 'Program files/Borland/DelphiX/quickrpt'.

--Undocumented PDF method 'AddTTFont' should be used to embed TrueType fonts in PDF documents.  Font names with spaces should have the spaces replaced with hyphens e.g. 'Times Roman' goes to 'Times-Roman'.

--Composite reports when previewing take the properties of the first report in the list. For instance the PrevHeight property of the first report is applied.

--The QRHTMLFilter component has moved to unit QRWebfilt.pas. It is still registered in old setups as in QRExport.pas. If you get a problem with this, just substitute the filename qrexport for qrwebfilt.

--Old library files which usually stay behind:
          windows\system\qrptXX.bpl
          {delphiX}\bin\dclqrtXX.bpl
  These should be removed as they stop QR4 from being installed.

--If the path is incorrect, using the Project|Options menu, select the 'Directories & Conditionals' tab. Use the browse button (...) to add the path of the QR source to the 'Search Path' list.

The default path is \program files\quickrptXI.
